VARCOS
A Passage to Success

Our Students Speak up their minds..

Omkar Naikwad
Trained on Functional
Testing, Core Java,
Selenium May20 Batch

"I learned the understanding of core java concepts, manual testing and Automation testing using Selenium in Java. This course has given me confidence to work on Functional Testing, Core Java, and Selenium. e.g. Before the course I was not very clear about the concepts of Java and now I am more clear about the understanding of Java.

I wasn't much aware of Automation testing and selenium, this course has taught me how easy and efficient Automation testing is!

I could solve similar programs of key concepts such as Strings, Inheritance with full confidence.Assignments were given based on real and known websites, they also helped us to tackle the challenges we faced while automating.

VJ Sir's teaching Style is great. The way of explaining the concepts to us is very interesting and reliable.

VJ sir goes extra mile to ensure that concept is clear to students,e.g.When I had a question regarding types of testing and SDLC, he explained the topic again to make us understand the query. "
